Protocol for production of rat polyclonal antibodies

Version 2010/01

EN

Agro-Bio has developed a time-optimized immunization protocol, yielding quality antibodies, needing low amounts of antigen. We recommend the use of 5 animals minimum to follow the protocol of immunization in order to overcome the differences obtained due to the genetic variability between each animal.

The small rodents such as the rat (*Rattus norvegicus*) represent species of choice when **small quantities of antigens** are **available** and when the production of **weak volumes of antibodies** are enough for the foreseen use.

Our standard protocol **35 days** with 3 rats allows you to obtain after 3 injections of antigen, **1 mL of antiserum by rat**.

Species:	Wistar rat Other rats are available on inquiry.
Antigens:	Peptides, proteins, bacteria, viruses or any other inactivated or nontoxic organism whose antigenicity and immunogenicity have been demonstrated. Concentration advised > 1 mg / mL
Antigen quantities:	To obtain good titers of antibodies, AGRO-BIO uses for a protocol 35 days: - 900 µg by rat, - 5.10 ⁸ CFU or PFU by rat.
Injections:	The first injection is carried out by subcutaneous or intraperitoneal injection in FCA whereas the booster injections are made in incomplete Freund's adjuvant.

Immunization protocol

Day	0	14	28	35
Injection	1 st	2 nd	3 rd	
Volume of serum	Pre-immune ⁽¹⁾ 1 mL			1 mL of serum

⁽¹⁾ Pre-immune serum enables to determine whether the animals have naturally occurring antibodies that can recognize non-specifically the antigen of interest.

Within two weeks following the dispatch of your order, you will receive a provisional timetable listing the various stages of your service.

Included in our protocol:

- The purchase of animals, the quarantine period and transfer to experimentation,
- The guard of animals during the protocol,
- The injections and withdrawals of animals,
- The 10-day guard while awaiting your decision on the fate of animals,
- The sacrifice of animals without recovery of serum.

Not included in our protocol:

- The charges,
- The guard of animals for a period exceeding 10 days (you have 10 days starting from last collection reception date to inform us of your decision to continue or not your protocol. After this deadline and in the absence of response from you, we are forced to sacrifice your animals),
- Intracardiac puncture of end protocol (corresponding to « exsanguination »).

Cf. General terms of sale.

Agro-Bio is approved by the prefecture of Loir-et-Cher for experimentation on vertebrate animals.
Accreditation number: B 41-285-4
